REASONS FOR ALLOWANCE

1. The following is an examiner's statement of reasons for allowance of claims 1-8 and 13-16: The closest prior art being Lindauer and Porter did not teach or suggest a dispensing device as claimed by the applicant, specifically a dispensing device wherein when the enclosure contains a first liquid, raising a level of a second liquid relative to the dispensing device so as to subject the enclosure and valve to hydrostatic pressure causes a dose of the first liquid to be displaced from the enclosure to establish a column of the first liquid that acts on the valve and thereby increase the potential energy of the valve, and subsequent lowering of the level of the second liquid relative to the dispensing device so as to reduce the hydrostatic pressure acting on the valve causes the valve to deliver the dose by release of the potential energy, wherein the dispensing device further comprises a vent chamber assembly comprising a vent chamber and first and second tubes, the vent chamber being connected to the enclosure by the first tube and to the valve by the second tube, the dispensing device being operable such that the column of the first liquid is established in the second tube, the vent chamber assembly being operable to vent displaced air from the dispensing device as the column of the first liquid is established, and the second tube being provided with capillary device operable to draw the first liquid along the second tube so as to accelerate the establishment of the column of the first liquid, together in combination with the other claimed features of applicant's invention.
2. The following is an examiner's statement of reasons for allowance of claim 17: The closest prior art being Tsai did not teach or suggest a valve as claimed by the applicant, specifically a valve wherein the hydrostatic pressure causes the flexible membrane to seal the valve body so as to prevent a flow of the first liquid through the valve body, and when a level of

the second liquid is lowered relative to the valve so as to reduce the hydrostatic pressure, the flexible membrane unseals the valve body so as to allow a flow of the first liquid through the valve body, wherein the valve body is formed with an inlet channel and an outlet channel, the flexible membrane being operable, when subjected to hydrostatic pressure due to immersion of the valve in the second liquid, to prevent flow of the first liquid from the inlet channel to the outlet channel, and wherein the valve body is so configured that, in use, a first end of the outlet channel through which the first liquid enters the outlet channel is lower than a second end of the outlet channel through which the first liquid exits the outlet channel, such that when the valve is subjected to hydrostatic pressure, the hydrostatic pressure acting at the first end of the outlet channel is greater than that acting at the second end of the outlet channel, together in combination with the other claimed features of applicant's invention and applicant's arguments filed July 18, 2011, which were well taken and found to be convincing.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
